Note for Mac Users

Some keystrokes and menu items differ on a Mac from those used in Windows and Linux. The table below gives some common substitutions for the instructions in this chapter. For a more detailed list, see the application Help.

<i>Windows/Linux</i>	<i>Mac equivalent</i>	<i>Effect</i>
Tools > Options menu selection	OpenOffice > Preferences	Access setup options
<i>Right-click</i>	<i>Control+click</i>	Open context menu
<i>Ctrl</i> (Control)	⌘ (Command)	Used with other keys
<i>F5</i>	<i>Shift+⌘+F5</i>	Open the Navigator
<i>F11</i>	<i>⌘+T</i>	Open Styles & Formatting window

 Function and Arrow Key Shortcuts..... 5

 Cell Formatting Shortcuts..... 7

 Pivot Table Shortcuts..... 8

Introduction

You can use Calc without a mouse or trackball by using its built-in keyboard shortcuts.

OpenOffice has a general set of keyboard shortcuts available in all components and a component-specific set directly related to the work of that component.

For help with OpenOffice's keyboard shortcuts or using OpenOffice with a keyboard only, search the OpenOffice online help using the "shortcut" or "accessibility" keywords.

In addition to using the built-in keyboard shortcuts listed in this Appendix, you can define your own. See Chapter 14 (Setting Up and Customizing Calc) for instructions.

Formatting and editing shortcuts are described in Chapter 2 (Entering, Editing, and Formatting Data).

Navigation and Selection Shortcuts

Table 1: Spreadsheet navigation shortcuts

Shortcut Keys	Effect
<i>Ctrl+Home</i>	Moves the cursor to the first cell in the sheet (cell A1).
<i>Ctrl+End</i>	Moves the cursor to the intersection of the last row and the last column that have content. The cell itself may be empty.
<i>Home</i>	Moves the cursor to the first cell of the current row.
<i>End</i>	Moves the cursor to the last cell of the current row in a column containing data.
<i>Ctrl+Left Arrow</i>	Moves the cursor to the left edge of the current data range. If the column to the left of the cell that contains the cursor is empty, the cursor moves to the next column to the left that contains data.
<i>Ctrl+Right Arrow</i>	Moves the cursor to the right edge of the current data range. If the column to the right of the cell that contains the cursor is empty, the cursor moves to the next column to the right that contains data.
<i>Ctrl+Up Arrow</i>	Moves the cursor to the top edge of the current data range. If the row above the cell that contains the cursor is empty, the cursor moves up to the next row that contains data.
<i>Ctrl+Down Arrow</i>	Moves the cursor to the bottom edge of the current data range. If the row below the cell that contains the cursor is empty, the cursor moves down to the next row that contains data.
<i>Ctrl+Shift+Arrow</i>	Selects all cells containing data, from the current cell to the end of the continuous range of data cells, in the direction of the arrow pressed. If used to select rows and columns together, a rectangular cell range is selected.

Shortcut Keys	Effect
<i>Ctrl+Page Up</i>	Moves one sheet to the left. In the page preview, it moves to the previous print page.
<i>Ctrl+Page Down</i>	Moves one sheet to the right. In the page preview, it moves to the next print page.
<i>Page Up</i>	Moves the viewable rows up one screen.
<i>Page Down</i>	Moves the viewable rows down one screen.
<i>Alt+Page Up</i>	Moves the viewable columns one screen to the left.
<i>Alt+Page Down</i>	Moves the viewable columns one screen to the right.
<i>Shift+Ctrl+Page Up</i>	Adds the previous sheet to the current selection of sheets. If all the sheets in a spreadsheet are selected, this combination only selects the previous sheet. Makes the previous sheet the current sheet.
<i>Shift+Ctrl+Page Down</i>	Adds the next sheet to the current selection of sheets. If all the sheets in a spreadsheet are selected, this combination only selects the next sheet. Makes the next sheet the current sheet.
<i>Ctrl+*</i>	Selects the data range that contains the cursor. A range is a contiguous cell range that contains data and is bounded by empty rows and columns. The "*" key is the multiplication sign on the numeric keypad.
<i>Ctrl+/ /</i>	Selects the matrix formula range that contains the cursor. The "/" key is the division sign on the numeric key pad.
<i>Enter</i> — in a selected range	By default, moves the cursor down one cell in a selected range. To specify the direction that the cursor moves, choose Tools > Options > OpenOffice Calc > General .

Function and Arrow Key Shortcuts

Table 2: Function key shortcuts

Shortcut Keys	Effect
<i>F1</i>	Displays the OpenOffice help browser. When the help browser is already open, <i>F1</i> jumps to the main help page.
<i>Shift+F1</i>	Displays context help.
<i>Ctrl+F1</i>	Displays the comment that is attached to the current cell.
<i>F2</i>	Switches to Edit mode and places the cursor at the end of the contents of the current cell. If the cursor is in an input box in a dialog that has a minimize button, the dialog is hidden and the input box remains visible. Press <i>F2</i> again to show the whole dialog.
<i>Ctrl+F2</i>	Opens the Function Wizard.

Shortcut Keys	Effect
<i>Shift+Ctrl+F2</i>	Moves the cursor to the input line, where you can enter a formula for the current cell.
<i>Ctrl+F3</i>	Opens the <i>Define Names</i> dialog.
<i>F4</i>	Shows or hides the <i>Data Sources</i> menu.
<i>Shift+F4</i>	Rearranges the relative or absolute references (for example, A1, \$A\$1, \$A1, A\$1) in the input field.
<i>F5</i>	Shows or hides the <i>Navigator</i> .
<i>Shift+F5</i>	Traces dependents, that is, items whose nature and role are contingent upon the current field.
<i>Shift+Ctrl+F5</i>	Moves the cursor to the Name box.
<i>F7</i>	Checks spelling in the current sheet.
<i>Ctrl+F7</i>	Opens the <i>Thesaurus</i> if the current cell contains text.
<i>Shift+F7</i>	Traces precedents, that is, items whose nature and role determine those of the current field.
<i>F8</i>	Turns additional selection mode on or off. In this mode, you can use the arrow keys to extend the selection. You can also click in another cell to extend the selection.
<i>Ctrl+F8</i>	Colors cells depending on whether they contain text (black), numbers (blue), or a formula (green).
<i>F9</i>	Recalculates all of the formulas in the sheet whose inputs have changed.
<i>Shift+Ctrl+F9</i>	Hard recalculate. All formulas are recalculated.
<i>F11</i>	Opens the Styles and Formatting window where you can apply a formatting style to the contents of the cell or to the current sheet.
<i>Shift+F11</i>	Creates a document template.
<i>Shift+Ctrl+F11</i>	Updates templates.
<i>F12</i>	Groups the selected data range.
<i>Ctrl+F12</i>	Ungroups the selected data range.

Table 3. Arrow key shortcuts

Shortcut Keys	Effect
<i>Alt+Down Arrow</i>	Increases the height of the current row.
<i>Alt+Up Arrow</i>	Decreases the height of the current row.
<i>Alt+Right Arrow</i>	Increases the width of the current column.
<i>Alt+Left Arrow</i>	Decreases the width of the current column.

Shortcut Keys	Effect
<i>Alt+Shift+Arrow Key</i>	Optimizes the column width or row height based on the current cell.

Cell Formatting Shortcuts

Ctrl+1 opens the Format Cells dialog.

Note

The shortcut keys shown in Table 4 **do not** use the number keys on the number pad. They use the number keys above the letter keys on the main keyboard.

Table 4: Formatting shortcut keys

Shortcut Keys	Effect
<i>Ctrl+Shift+1</i>	Two decimal places, thousands separator
<i>Ctrl+Shift+2</i>	Standard exponential format
<i>Ctrl+Shift+3</i>	Standard date format
<i>Ctrl+Shift+4</i>	Standard currency format
<i>Ctrl+Shift+5</i>	Standard percentage format (two decimal places)
<i>Ctrl+Shift+6</i>	Standard format

Pivot Table Shortcuts

These shortcuts apply to the dialog used to define the layout of a Pivot Table.

Table 5: Pivot Table shortcut keys

Shortcut Keys	Effect
<i>Tab</i>	Changes the focus by moving forward through the areas and buttons of the dialog.
<i>Shift+Tab</i>	Changes the focus by moving backward through the areas and buttons of the dialog.
<i>Up arrow</i>	Moves the focus up one item in the current dialog area.
<i>Down arrow</i>	Moves the focus down one item in the current dialog area.
<i>Left arrow</i>	Moves the focus one item to the left in the current dialog area.
<i>Right arrow</i>	Moves the focus one item to the right in the current dialog area.
<i>Home</i>	Selects the first field in the current layout area.
<i>End</i>	Selects the last field in the current layout area.
<i>Alt+R</i>	Copies or moves the current field into the “Row” area.
<i>Alt+C</i>	Copies or moves the current field into the “Column” area.
<i>Alt+D</i>	Copies or moves the current field into the “Data” area.
<i>Ctrl+Up Arrow</i>	Moves the current field up one place.
<i>Ctrl+Down Arrow</i>	Moves the current field down one place.
<i>Ctrl+Left Arrow</i>	Moves the current field one place to the left.
<i>Ctrl+Right Arrow</i>	Moves the current field one place to the right.
<i>Ctrl+Home</i>	Moves the current field to the first place.
<i>Ctrl+End</i>	Move the current field to the last place.
<i>Alt+O (the letter O)</i>	Displays the options for the current field.
<i>Delete</i>	Removes the current field from the area.
