Published October 30, 2025. Based on Apache OpenOffice 4.1.

Note for Mac Users

Some keystrokes and menu items differ on a Mac from those used in Windows and Linux. The table below gives some common substitutions for the instructions in this chapter. For a more detailed list, see the application Help.

Windows/Linux	Mac equivalent	Effect
Tools > Options menu selection	OpenOffice > Preferences	Access setup options
<i>Right-click</i>	<i>Control+click</i>	Open context menu
<i>Ctrl</i> (Control)	⌘ (Command)	Used with other keys
<i>F5</i>	<i>Shift+⌘+F5</i>	Open the Navigator
<i>F11</i>	<i>⌘+T</i>	Open Styles & Formatting window

Designing a Presentation

In addition to carefully planning the content (as discussed in Chapter 1), you also need to plan the presentation's appearance. It is best to do this after you have developed an outline; the outline will determine some of the requirements for the slides' appearance. For example:

- What color combinations (background and text) will look good and also be easy for your audience to read?
- Would a picture help your audience better understand the contents?
- Do you want a particular text and a picture to appear on all the slides? (for example, a company name and logo.)
- Would the audience benefit from having the slides numbered so that they can quickly refer to one of them?
- Do you want a background graphic or a gradient? If so, you need to pick something that does not interfere or clash with content, such as the colors used in charts.
- Will you need one slide master or several? Will one slide design suit all of the content?

You can change the appearance of slides as you develop the presentation, but planning ahead will save you time in the long run.

What are Slide Masters?

A *slide master* is a slide that is used as the starting point for other slides. It is similar to a page style in Writer: it controls the basic formatting of all slides based on it. A slide show can have more than one slide master.

Note

AOO uses three terms for this one concept. *Master slide*, *slide master*, and *master page* all refer to a slide that is used to create other slides. This book uses the term *slide master*, except when describing the user interface.

A slide master has a defined set of characteristics, including the background color, graphic, or gradient; objects (such as logos, decorative lines, and other graphics) in the background; headers and footers; placement and size of text frames; and the formatting of text.

All of the characteristics of slide masters are controlled by *styles*. The styles of any new slide you create are inherited from the slide master from which it was created. In other words, the styles of the slide master are available and applied to all slides created from that slide master. Changing a style in a slide master results in changes to all slides based on that slide master. However, it is possible to modify each slide without affecting the slide master.

Note

Although it is highly recommended to use slide masters whenever possible, there are occasions when manual changes are needed for a particular slide, for example, to enlarge the chart area when using text and chart layouts.

Slide masters have two types of styles associated with them: *presentation styles* and *graphics styles*. The prepackaged presentation styles can be modified, but new presentation styles cannot be created. However, new *graphics* styles can be created.

Presentation styles are discussed in detail in Chapter 3 (Working with Text). The use of graphics styles is covered in Chapter 6 (Formatting Graphic Objects). See also Working with Styles in Impress on page 16.

Working with Slide Masters

Impress comes with 30 pre-packaged slide masters. They are shown in the Master Pages deck of the Sidebar (Figure 1). This deck has three panels: *Used in This Presentation*, *Recently Used*, and *Available for Use*. Click the + sign next to the name of a panel to expand it to show thumbnails of the slides, or click the - sign to collapse the panel to hide the thumbnails.

Each of the slide masters shown in the *Available for Use* list is from a template of the same name. If you have created your templates or added templates from other sources, slide masters from those templates will also appear in this list. See Working with Templates on page 16 for more about templates.

Creating Slide Masters

You can create a new slide master in a way that is similar to modifying a default slide master.

To start, enable editing of slide masters by selecting **View > Master > Slide Master**. You can also right-click on the default slide master in the Master Pages section of the tasks pane and select **Edit Master**.

On the Master View toolbar, click the **New Master** icon (the leftmost icon in the figure below).

A second slide master appears in the Slides pane. Modify this slide master to suit your requirements. It is recommended that you rename this new slide master. To do this, right-click on the slide in the Slides pane and select **Rename master** from the pop-up menu.

When you are done, close the Master View toolbar to return to normal slide editing mode.

Applying a Slide Master

In the Sidebar, be sure the Master Pages deck is showing. (See Figure 1.)

To apply one of the slide masters to *all slides* in your presentation, click on it in the list.

To apply a different slide master to one or more *selected slides*:

- 1) In the Slides Pane, select the slides you want to change.
- 2) In the Sidebar, right-click on the slide master you want to apply to the selected slides, and click **Apply to Selected Slides** on the pop-up menu.

Figure 1: Available master pages (slides)

Loading Additional Slide Masters

Sometimes, in the same set of slides, you may need to mix multiple slide masters that may belong to different templates (the use of templates is explained later in Working with Templates on page 16). For example, you may need a completely different layout for the first slide of the presentation, or you may want to add a slide from a different presentation to your current presentation (based on a template available on the hard disk).

The Slide Design dialog box (Figure 2) makes this possible. Access this dialog box either from the menu bar (**Format > Slide design**) or from the pop-up menu that appears when you right-click on a slide in the Slides pane.

The main window in the dialog box shows the slide masters already available for use. To add more:

- 1) Click the **Load** button.
- 2) In the Load Slide Design dialog box, select the template from which to load the slide master. Click **OK**.
- 3) Click **OK** again to close the slide design dialog box.

The slide masters in the template you selected are now also shown in the Master Pages deck of the Sidebar in the *Available for use* panel.

Note

The slide masters you have loaded will also be available the next time you load the presentation. If you want to delete unused slide masters, click the corresponding checkbox in the Slide Design dialog box.

Figure 2: Loading slide masters from a presentation template

Tip

To limit the size of the presentation file, consider minimizing the number of slide masters used.

Modifying a Slide Master

The following items can be changed on a slide master:

- Background (color, gradient, hatching, or bitmap)
- Background objects (for example, add a logo or decorative graphics)
- Text attributes for the main text window and notes
- Size, placement, and contents of header and footer elements to appear on every slide
- Size and placement of default frames for slide titles and content

Refer to Figure 5 for a graphical representation of many of these elements.

Before working on the slide master, make sure that the Styles and Formatting window is open. See page 12 for instructions on doing this.

To select a slide master for modification:

- 1) Select **View > Master > Slide Master** from the menu bar. This unlocks the properties of the slide master, allowing you to edit it.
- 2) Click the *Master Pages* icon in the Sidebar. This gives you access to the prepackaged slide masters.
- 3) Click on the slide master you want to modify from those available (Figure 1).
- 4) Make changes as described in this chapter, then click the **Close Master View** icon on the Master View toolbar. Save the file before continuing.

Caution

Any changes made to one slide when in Master View mode will appear on all slides using this slide master. Always make sure you close Master View and return to Normal view before working on any of the presentation slides. Select **View > Normal** from the menu bar, or click **Close Master View** in the Master View toolbar to return to the normal slide view.

The changes made to one of the slides in Normal view (for example, changes to the bullet point style, the color of the title area, and so on) will not be overridden by subsequent changes to the slide master. However, there are cases where it is desirable to revert a manually modified element of the slide to the style defined in the slide master. To do this, select the element and choose **Format > Default Formatting** from the menu bar.

It is also possible to modify the default layout of the slide master, for example, by moving the title to the side; however, you are restricted to modifications to the “Title, Text” layout (that is, the layout containing a title box and a text box).

Sometimes, depending on the contents of the slide, you may want to apply a different layout. The title and text boxes will inherit the properties of the slide master. However, if you have changed the position of these text boxes in the slide master, the layout may appear corrupted, and you may need to manually reposition some of the layout elements.

Choosing and Applying the Background

Backgrounds can be applied to a number of elements in Impress, including the page, a default text area, a graphic object, and more. The procedures to apply a background are always the same.

The following procedure is used to apply a background to the page.

- 1) To begin, do one of the following:
 - Select **Format > Page** from the menu bar. On the Page Setup dialog box, choose the *Background* tab.
 - Make sure the Presentation Styles icon is selected in the Styles and Formatting window (Figure 6). Then, right-click **Background** and select **Modify** from the pop-up menu. This opens the Background dialog box.
- 2) Select the type of fill you want for your background from the five choices: None, Color, Gradient, Hatching, or Bitmap as shown in Figure 3.

Figure 3: Background choices

A list of choices for the selected fill type then appears (see Figure 4 for an example).

Figure 4: Background colors

- 3) Select one of the items on the list and click **OK**. The fill you have chosen is added to the slide master, replacing any previously selected fill.

Tip

You can make custom additions to each type of background, with the obvious exception of *None*. After you create new fills, they are listed in the Background dialog box along with the fills provided with AOO. For example, the last color in Figure 4, *Test Blue*, is a custom color. See Chapter 6 for more information.

Adding Background Objects

This section describes how to add background objects and graphic elements (such as a logo, decorative lines, and so on). AOO supports a large number of graphical formats.

When you want the same graphic to appear on every slide of your presentation, the easiest and quickest solution is to use the slide master. It saves time while creating the presentation, and also when you want to modify or reposition the graphic on the slide. If the graphic is added to each slide manually, these operations have to be performed on each individual slide in the presentation.

One of the most common actions in preparing a presentation is to add a picture to the slide master. To insert a picture already available on your system, follow these steps:

- 1) Choose **View > Master > Slide Master** from the menu bar.
- 2) Select from the menu bar **Insert > Picture > From File**.
- 3) Navigate to the directory where your picture is and select it. To see a preview, select the corresponding checkbox in the file browser dialog box.

Caution

AOO offers the option to insert a picture as a link to the file rather than embedding it in the document. This can be useful when a presentation is not intended to be distributed but rather will remain in the existing hierarchical directory structure: for example, a presentation created and displayed to a group of clients on a single notebook computer.

If the presentation file is to be distributed, the picture should be embedded to avoid the “missing picture” syndrome when the presentation is given on a different computer.

Once the picture is inserted, you need to move it to the background. To do this, while the picture is still selected, right-click on it and select **Arrange > Send to Back** from the context menu. You may also need to reposition it and modify its size. To do that, see Chapter 4 (Adding and Formatting Pictures).

Tip

If you want the image to blend with the background, you can set the background color of the picture to transparent. Select the picture, then choose **Tools > Color Replacer** from the menu bar. Select the first checkbox, then move the mouse cursor over the picture and click on the color you want to make transparent. This color appears next to the checkbox. Make sure that *Replace with...* is set to **Transparent** and click **Replace**.

Tip

An easy way to make the picture lighter, so that the text stands out better against its background, is to increase the transparency of the picture or change the [gamma](#). Both of these adjustments can be made quickly from the Picture toolbar.

In addition to pictures, you can add a number of other background objects, such as decorative lines, text, and shapes. Figure 5 is an example of a slide master with a custom background gradient, a background image, a picture in the top right corner, decorative lines, and customized presentation styles.

Figure 5: Example of a complex slide with several modifications

Slide Master Styles

Within the slide master, you can define a complete set of styles that define the default appearance of text and graphic objects inserted in slides based on that background. If, for example, your slide master has a dark background, you may want to set the font color of the title and text areas to be light. Rather than manually changing the font color for every new slide you create, a time-consuming operation prone to errors and omissions, simply modify the style in the slide master. Changes made to styles in the slide master only apply to the slides based on that particular slide master.

Styles in Impress are subdivided into two main categories: *Presentation styles* and *Graphics styles*.

Presentation Styles

Presentation styles affect three elements of a slide master: the background, background objects (such as icons, decorative lines, and text frames), and the text placed on the slide. Text styles are further divided into *Notes*, *Outline 1* through *Outline 9*, *Subtitle*, and *Title*. The outline styles are used for the different levels of the outline to which they belong. For example, Outline 2 is used for the subpoints of Outline 1, and Outline 3 is used for the subpoints of Outline 2.

The prepackaged presentation styles can be modified, but new presentation styles cannot be created.

Graphics Styles

Graphics styles apply to lines, shapes, and text boxes created using the Impress drawing tools and define the formatting of such objects.

There are 16 prepackaged graphics styles to choose from. You can create additional styles or modify the prepackaged styles.

Note

The presence of text and title styles both in the Presentation and Graphics styles may seem confusing. This apparent duplication is because Impress facilitates the operation of adding structured text to the slides by means of special text boxes where the Presentation styles apply (Autolayout boxes). The title and other text styles in the Graphics styles group continue to apply to other text boxes you may want to add, or to the text associated with shapes or lines.

The Styles and Formatting Window

To work on the slide master styles, start by opening the Styles and Formatting deck in the Sidebar, as shown in Figure 6. The same tool is available by pressing *F11* or selecting **Format > Styles and Formatting** from the main menu.

Figure 6: Styles and Formatting window

Tip

At the bottom of the Styles and Formatting window is a drop-down list. You can choose to show all styles or groups of styles, for example, applied styles or (in the case of Graphics styles) custom styles.

You can dock or undock the Styles and Formatting window by holding down the *Control* key while double-clicking the top of the window between the icons (see Figure 6). Press *F11* to close the Styles and Formatting window when you no longer need it. OpenOffice.org will remember its position the next time you reopen it.

Modifying Default Text Areas

When a slide master is opened for editing, it contains five areas, as shown in Figure 7:

- Title area for AutoLayouts
- Object area for AutoLayouts
- Date area
- Footer area
- Slide number area

Figure 7: Slide master showing five editable areas

Click with the left mouse button on any of these areas to display eight green squares (handles) around the rectangle. Use these handles to modify the size and position of the area.

- 1) To change the position, move the mouse towards one of the edges, away from the green handles, until the cursor changes shape¹, then click the left mouse button and drag the area to the desired position.
- 2) To modify the shape and size of one of the rectangular areas, use one of the 8 green handles. The handles in the corners modify both sides of the rectangle simultaneously, while those in the middle of the sides modify only one dimension at a time. The shape of the mouse cursor usually changes when over the handle, giving a clear visual indication of how it will affect the shape of the rectangular area.

¹ The shape of the cursor to move and resize objects is operating system specific.

Tip

To keep the ratio between the sides of the rectangular area constant, move the mouse to one of the 4 green handles at the corner of the area and keep the *Shift* key pressed while dragging the handle with the mouse.

To accurately control the shape, size, and position of the default text area, it is better to use the Position and Size dialog box rather than the mouse. First, select the rectangular area by clicking on any point inside it, then press *F4* or choose **Format > Position and Size**. The dialog box shown in Figure 8 is displayed.

Figure 8: The Position and Size dialog box

The functions of this dialog box are explained in the *Draw Guide*, so only a short description of the most important fields is provided in this chapter.

Use the *Position* section to specify the X (horizontal) and Y (vertical) position of the rectangular area. The values represent the distance of the base point (selected on the right side) relative to the top-left corner of the slide.

Use the *Size* section to specify the width and height of the rectangular area. In the Base point section, select the part of the rectangular area you do not want to move while resizing. The default setting (top left corner) means that the position of the top left corner of the chosen area will not change after resizing.

You can also use the *Rotation* tab of the dialog box to rotate the default text area. For example, you can place the footer area on the side by rotating each text area by 90 degrees, and obtain a more modern-looking layout. In general, it is preferable to use only right angles for ease of editing, although the program does not impose restrictions on the values that can be used.

Further Modifications to the Default Text Areas

Besides the shape, size, and position, it is also possible to modify other aspects of the 5 areas of the slide master, such as the background, border, alignment relative to the slide, and position relative to other objects.

While the background style and line style of an area can be accessed from the Format menu, to access the Alignment and Arrange menus, you must either open the

Drawing toolbar or use the context menu. To display the Drawing toolbar (Figure 9), select it in **View > Toolbars**; to open the context menu, right-click on the edge of the rectangular area after selecting it. On the Drawing toolbar, click the arrow next to the Alignment or Arrange icon (highlighted in Figure 9) to display choices. See the *Draw Guide* for details.

Figure 9: Alignment and Arrange icons on the Drawing toolbar

The date area and slide number area do not automatically appear on every slide, even though you have defined them. To show them, you need to close the Master View and select the desired field from the menu bar: **Insert > Page number** or **Insert > Date and time**. This procedure is explained in detail in Chapter 8 (Adding and Formatting Slides, Notes, and Handouts).

Adding Text to All Slides

Some of the supplied slide masters have text objects in the footer. You can add other text objects to the master page for your slides; these additions can act as a header or footer.

- 1) Choose **View > Master > Slide Master** from the menu bar.
- 2) On the **Drawing** toolbar (see Figure 9), select the **Text** icon.
- 3) Click once and drag in the master page to draw a text object, and then type or paste your text into the object or add fields as described below.
- 4) Choose **View > Normal** when you are finished.

To add a field, such as the date or page number, to a text object in the header or footer, choose **Insert > Fields**, and select the required field from the submenu. If you want to edit a field in your slide, select it and choose **Edit > Fields**.

The types of data you can use as fields in Impress are:

- Date (fixed).
- Date (variable) —updates automatically when you reload the file.
- Time (fixed).
- Time (variable)—updates automatically when you reload the file
- Author—First and last names listed in the Apache OpenOffice user data.
- Page number (slide number).
- File name.

Tip

To change the number format (1,2,3 or a,b,c or i,ii,iii, etc.) for the page number field, choose **Format > Page** and then select a format from the list in the **Layout Settings** area of the Page tab.

To change the author information, go to **Tools > Options > OpenOffice > User Data**.

Working with Styles in Impress

If you are familiar with styles in Writer, you'll find not only similarities but also differences in Impress. Presentation styles are similar to paragraph styles in Writer, and are used in a very similar fashion. You cannot create new presentation styles, but you can fully configure the existing ones. Note that, as with Heading styles in Writer, Outline styles in Impress are hierarchically linked, so that a change in Outline 1 will cascade through all other Outline levels.

In Impress, you will also find the graphics styles very useful. They define the characteristics of a graphic object (including a text object). If, for example, you need to create an organization chart diagram in one of the slides of your presentation, you will likely want all of the boxes to have a consistent appearance, meaning the same line style, same font type, maybe the same shadow, and so on. The easiest way to achieve this result with minimal effort is to create a graphics style for the boxes and apply it to each one. The major benefit is that if you decide to modify, say, the background color of the boxes later on, all you need to do is modify the style, rather than each individual box.

Presentation styles are discussed in detail in Chapter 3 (Working with Text). The use of graphics styles is covered in Chapter 6 (Formatting Graphic Objects).

Working with Templates

All documents in Apache OpenOffice (AOO) are based on templates. However, Impress is a little different from other AOO components in that it starts with the Presentation Wizard unless you have elected to turn the Wizard off.

When you choose **File > New > Presentation** from the menu bar, if the Presentation Wizard is active, it offers several choices for a new presentation, one of which is *"From template"*.

If you have turned the Presentation Wizard off, when you start a new presentation by choosing **File > New > Presentation** from the menu bar, AOO uses the default presentation template. If you have not defined your own default template, AOO uses a blank template supplied with the program.

Using Templates Supplied with AOO

Impress comes with a set of predefined templates. Two are in the *Presentations* folder, and the others are in the *Presentation backgrounds* folder. The difference between them is that *Presentation* templates include a series of slides with sample titles and topics, while *Presentation background* templates have only backgrounds and background objects. Both types have predefined presentation and graphics styles.

You can create a new presentation from a previously saved presentation template by choosing **File > New > Templates and Documents** from the menu bar. This opens the Templates and Documents - Templates window. To open a new presentation based on a template, double-click that template's name in the list.

Using Templates From Other Sources

If you have created your own templates or imported templates from another location, they are probably stored in the My Templates folder within the Templates and Documents - Templates window. Templates installed using the Extension Manager

may be installed in their own folders. You can use them in the same way as the templates installed with Impress.

See page 21 for information on importing templates into AOO.

Installing Templates Using the Extension Manager

The Extension Manager provides an easy way to install collections of templates, graphics, macros, or other add-ins that have been “packaged” into files with a .OXT extension.

Although individual extensions can be found in different places, the official OpenOffice.org extension repository is at <https://extensions.services.openoffice.org/>. Some extensions are free of charge, while others are available for a fee. Check the descriptions to see what licenses and fees apply to the ones that interest you.

For more about the Extension Manager and some extensions of interest to Impress users, see Chapter 11 (Setting up and Customizing Impress).

To install a collection of templates packaged as an extension:

- 1) Download the extension and save it anywhere on your computer.
- 2) In AOO, select **Tools > Extension Manager** from the menu bar. In the Extension Manager dialog box, click **Add**.
- 3) A file browser window opens. Find and select the extension you want to install and click **Open**. The extension begins installing. You may be asked to accept a license agreement.
- 4) When the installation is complete, the extension is listed in the Extension Manager dialog box.

The slide masters from the templates will now appear in the list of Available Master Pages in the Sidebar (Figure 1).

Tip

To get extensions that are listed in the repository, you can open the Extension Manager and click the **Get more extensions online** link. You do not need to download them separately as in step 1 above.

Creating Your Own Templates

To create a template from a presentation:

- 1) Open the presentation that you want to use as a template.
- 2) From the main menu, choose **File > Templates > Save**. The Templates window opens (see Figure 10).
- 3) In the **New template** field, type a name for the new template.
- 4) In the **Categories** list, click the folder in which you want to store the template. This is usually the My Templates folder, unless you have created other folders. To learn more about template folders, see “Organizing templates” on page 20.
- 5) Click **OK**. AOO saves the new template, and the Templates window closes.

Figure 10. Saving a new template

Note All the slide masters used in the template become available for use in other presentations.

Setting a Default Template

You can set a custom presentation template to be the default template. You can reset the default later if you choose.

Setting a Custom Template as the Default

You can set any template to be the default, as long as it is in one of the folders displayed in the Template Management dialog box.

To set a custom template as the default:

- 1) From the main menu, choose **File > Templates > Organize**. The Template Management dialog box opens as shown below.

Figure 11. Template Management dialog box

- 2) In the box on the left, double-click the folder containing the template that you want to set as the default, then select the template.

- 3) Click the **Commands** button.
- 4) From the drop-down menu, choose **Set As Default Template**. The next time that you create a document by choosing **File > New**, the document will be created from this template.

Resetting the Default to Impress's Built-in Default Template

To re-enable Impress's Default presentation background template as the default:

- 1) In the Template Management dialog box, click the Presentation Backgrounds folder in the box on the left.
- 2) Click the **Commands** button.
- 3) From the drop-down menu, choose **Reset Default Template > Presentation**.

Note Use the instructions in this section only if you have customized the presentation template.

Modifying a Template

You can edit a template's styles and content, and then, if you wish, you can reapply the template's styles to documents that were created from that template.

Note You can only reapply styles. You cannot reapply content.

To edit a template:

- 1) From the main menu, choose **File > Templates > Edit**. A standard file browser window opens.
- 2) Find and select the template that you want to edit, and then click **Open**. The selected template opens in Impress.
- 3) Edit the template just as you would any other presentation. To save your changes, choose **File > Save** from the main menu.

The next time you open a presentation created from the changed template, the following message appears.

Figure 12. Update styles message

Click **Update Styles** to apply the template's changed styles to the document. Click **Keep Old Styles** if you never want to apply the template's changed styles to the document. Whichever option you choose, the message box closes and the presentation opens in Impress.

Organizing templates

AOO can only use templates that are in AOO template folders. You can create new AOO template folders and use them to organize your templates. For example, you might have separate template folders for different purposes or projects. You can also import and export templates.

To begin, choose **File > Templates > Organize** from the main menu. The Template Management dialog box (Figure 11) opens.

Note

All the actions made available by the **Commands** button in the Template Management window can also be accessed by right-clicking on the templates or the folders.

Creating a Template Folder

To create a template folder:

- 1) In the Template Management dialog box, click any folder.
- 2) Click the **Commands** button and choose **New** from the drop-down menu. A new folder called *Untitled* appears.
- 3) Type a name for the new folder, and then press *Enter*. AOO saves the folder with the name that you entered.

Deleting a Template Folder

You cannot delete the template folders supplied with AOO or installed using the Extension Manager. You can only delete folders you have created.

To delete a template folder that you have created:

- 1) In the Template Management dialog box, select the folder that you want to delete.
- 2) Click the **Commands** button and choose **Delete** from the drop-down menu. A message box appears, asking you to confirm the deletion. Click **Yes**.

Moving a Template

To move a template from one template folder to another:

- 1) In the Template Management dialog box, double-click the folder that contains the template you want to move. A list of all the templates contained in that folder appears underneath the folder name.
- 2) Click the template that you want to move and drag it to the desired folder. If you do not have the authority to delete templates from the source folder, this action *copies* the template instead of moving it.

Deleting a Template

You cannot delete the templates supplied with AOO or installed using the Extension Manager; you can only delete templates that you have created or imported.

To delete a template:

- 1) In the Template Management dialog box, double-click the folder that contains the template you want to delete. Click the template that you want to delete.
- 2) Click the **Commands** button and choose **Delete** from the drop-down menu. A dialog box appears, asking you to confirm the deletion. Click **Yes**.

Importing a Template

If the template that you want to use is in a different location, you must import it into an AOO template folder.

To import a template into a template folder from another location on your computer:

- 1) In the Template Management dialog box, click the folder into which you want to import the template.
- 2) Click the **Commands** button and choose **Import Template** from the drop-down menu. A standard file browser window opens.
- 3) Find and select the template you want to import, then click **Open**. The file browser window closes, and the template appears in the selected template folder.
- 4) If you want, type a new name for the template and then press *Enter*.

Exporting a Template

To export a template from a template folder to another location:

- 1) In the Template Management dialog box, double-click the folder that contains the template you want to export.
- 2) Click the template that you want to export.
- 3) Click the **Commands** button and choose **Export Template** from the drop-down menu. The Save As window opens.
- 4) Find the folder into which you want to export the template, and click **Save**.
