Publication date and software version

Published October 30, 2025. Based on Apache OpenOffice 4.1.

Note for Mac Users

Some keystrokes and menu items differ on a Mac from those used in Windows and Linux. The table below gives some common substitutions for the instructions in this chapter. For a more detailed list, see the application Help.

Windows/Linux	Mac equivalent	Effect
Tools > Options menu selection	OpenOffice > Preferences	Access setup options
<i>Right-click</i>	<i>Control+click</i>	Open context menu
<i>Ctrl</i> (Control)	⌘ (Command)	Used with other keys
<i>F5</i>	<i>Shift+⌘+F5</i>	Open the Navigator
<i>F11</i>	<i>⌘+T</i>	Open Styles & Formatting window

Opening a PowerPoint File in Impress.....	22

Introduction

This chapter discusses printing, exporting, and e-mailing documents from OpenOffice Impress.

Quick Printing

Click the **Print File Directly** icon  to send the entire document to the default printer defined for your computer.

Note

You can change the action of the **Print File Directly** icon to send the document to the printer defined for the document, instead of the default printer for the computer. Go to **Tools > Options > Load/Save > General** and select the **Load printer settings with the document** option.

Controlling Printing

Impress provides many options for printing a presentation, including multiple slides on one page, a single slide per page, with notes, as an outline, with date and time, and with page names, among others.

For more control over printing a presentation, choose **File > Print** to display the Print dialog shown in Figure 1.

Figure 1. The Print dialog

The Print dialog has four tabs, from which you can choose a range of options, described in the following sections.

	The options selected on the Print dialog apply to this printing of this document only.
Note	To specify default printing settings, go to Tools > Options > OpenOffice - Print and Tools > Options > OpenOffice Impress - Print . See “Selecting Default Print Options” on page 8 for more information.

Selecting General Printing Options

On the *General* tab of the Print dialog (Figure 1), you can choose:

- The **printer** (from the available printers)
- Which **slides** to print, the number of copies to print, and whether to collate multiple copies (*Range and copies* section)
- Whether to print slides, notes, handouts, or an outline of the presentation.
- For handouts, how many slides per printed page and in what order (see page 7 for details).

Click the **Properties** button to display a dialog where you can choose portrait or landscape orientation, which paper tray to use, and the paper size to print on.

The *Options* tab of the Print dialog provides other choices, as shown in Figure 2.

Figure 2: General print options

Printing Multiple Pages on a Single Sheet of Paper

You can print multiple pages of a document on one sheet of paper. To do this:

- 1) In the Print dialog, select the *Page Layout* tab (Figure 3).
- 2) In the *Layout* section, select from the drop-down list the number of pages to print per sheet. The preview panel on the left of the Print dialog shows how the printed document will look.
- 3) When printing more than 2 pages per sheet, you can choose the order in which they are printed across and down the paper. The two pictures in Figure 3 show the difference.
- 4) In the *Page sides* section, select whether to print all pages or only some pages.
- 5) Click the **Print** button.

Figure 3: Printing multiple pages per sheet of paper

Selecting Slides to Print

In addition to printing a full presentation, you can choose to print individual slides, a range of slides, or a selection of slides using the *Ranges and copies* section of the *General* tab in the *Print* dialog.

Be sure **Slides** is selected in the *Document* box in the *Print* section, as illustrated in Figure 4.

Figure 4: Ranges and copies section of Print dialog

To print an individual slide or several slides, do either of the following:

- Open the *Print* dialog, choose the **Slides** option in the *Ranges and copies* section, type the slide numbers, and click **Print**. Multiple slides may be represented by a list (for example, 1, 3, 7, 11) or a range (for example, 1-4).
- Select the slides in the *Slides pane* or the *Slide Sorter view*, then open the *Print* dialog and choose **Selection** in the *Ranges and copies* section, and click **Print**.

Selecting Other Information to Print

On the *OpenOffice Impress* tab of the Print dialog, you can choose:

- What to print in addition to the slides: Slide name, date and time, and hidden slides (pages).
- Whether to print in color, grayscale, or black and white (on a color printer).
- The size to print slides.

Figure 5: Selecting other information to print

Printing in Black and White (on a Color Printer)

You may wish to print slides in black and white or grayscale on a color printer. To do this, choose either **Grayscale** or **Black & white** in the *Color* section on the *OpenOffice Impress* tab of the Print dialog (Figure 5).

Printing Handouts, Notes, or Outlines in Impress

The *Document* box also gives you the option to print Handouts, Notes, or an Outline.

Handouts mean the slides are printed in reduced size on the page, from one to nine slides per page. The slides can be printed horizontally (landscape orientation) or vertically (portrait orientation) on the page.

Notes prints a single slide per page with any notes entered for that slide in Notes View.

Outline prints the title and headings of each slide in outline format.

To print handouts, notes, or outlines:

- 1) Choose **File > Print** from the menu bar.
- 2) In the *Print* section of the Print dialog, select the required option from the *Document* box.

- 3) For Handouts, as shown in Figure 6, you can then choose how many slides to print per page, and the order in which they are printed.
- 4) Click the **Print** button.

Figure 6: Printing handouts

Selecting Default Print Options

Selections on the Print dialog override any default settings. To specify default settings for printing, use **Tools > Options > OpenOffice Impress > Print**.

Other printer settings are found in **Tools > Options > OpenOffice > Print**. Use this page to specify quality settings for printing and whether to have Impress warn you if the paper size or orientation of your document does not match the printer settings.

See Chapter 11 (Setting Up and Customizing Impress) for details.

Printing a Brochure

You can print a presentation with two slides on each side of a sheet of paper, arranged so that when the printed pages are folded in half, the slides are in the correct order to form a booklet or brochure.

To print a brochure on a single-sided printer, as is illustrated in Figure 7:

- 1) Choose **File > Print**.
- 2) In the Print dialog, click **Properties**.
- 3) Check that the printer is set to the same orientation (portrait or landscape) as specified in the page setup for your document. Usually, the orientation does not matter, but it does for brochures. Click **OK** to return to the Print dialog.
- 4) Select the *Page layout* tab in the Print dialog.
- 5) Select the **Brochure** option.
- 6) In the *Page sides* section, select *Back sides / left pages* option from the Include drop-down list.
- 7) Click the **Print** button.

Figure 7: Printing a brochure from Impress

- 8) Take the printed pages from the printer, turn them over, and reinsert them into the printer in the correct orientation to print on the blank side. You may need to experiment to determine the correct arrangement for your printer.
- 9) On the Print dialog, in the *Page sides* section, select *Front sides / right pages* option from the Include drop-down box.
- 10) Click the **Print** button.

Tip If your printer can print double-sided automatically, choose **All pages**.

Exporting to PDF

Impress can export presentations to PDF (Portable Document Format). This industry-standard file format for file viewing is ideal for sharing the file with others to view using Adobe Reader or other PDF viewers.

Quick Export to PDF

Click the **Export Directly as PDF** icon  to export the entire presentation using the default PDF settings. You are asked to enter the file name and location for the PDF file, but you do not get a chance to choose a page range or the print quality.

Controlling PDF Content and Quality

For more control over the content and quality of the resulting PDF, use **File > Export as PDF**. The PDF Options dialog opens. This dialog has five tabs, described in this section. Make your selections, and then click **Export**. Then you are asked to enter the location and file name of the PDF to be created, and click **Save** to export the file.

General Tab of PDF Options Dialog

On the General tab, you can choose which pages (slides) to include in the PDF, the type of compression to use for images (which affects the quality of images in the PDF), and other options, like those shown in Figure 8.

Figure 8: General tab of PDF Options dialog

Range section

- **All:** Exports the entire document.
- **Pages:** To export a range of slides, use the format **3-6** (pages 3 to 6). To export single slides, use the format **7;9;11** (slides 7, 9, and 11). You can also export a combination of slide ranges and single slides by using a format like **3-6;8;10;12**.
- **Selection:** Exports whatever material is selected.

Images section

- **Lossless compression:** Images are stored without any loss of quality. Tends to make large files when used with photographs. Recommended for images or graphics that don't originate from photos.
- **JPEG compression:** Allows for varying degrees of quality. A setting of 90% tends to work well with photographs (small file size, little perceptible loss).

- **Reduce image resolution:** Lower-DPI (dots per inch) images have lower quality. For viewing on a computer screen, generally a resolution of about 100dpi is sufficient, while for printing, it is generally preferable to use at least 300 or 600 dpi, depending on the printer's capability. Higher dpi settings greatly increase the size of the exported file.

Note

EPS (Encapsulated PostScript) images with embedded previews are exported only as previews. EPS images without embedded previews are exported as empty placeholders.

General section

- **PDF/A-1:** PDF/A is an ISO standard for long-term preservation of documents, by embedding all the information necessary for faithful reproduction (such as fonts) while forbidding other elements (including forms, security, and encryption). PDF tags are written. If you select PDF/A-1, the forbidden elements are grayed out (not available).

Note

ISO is a voluntary, non-treaty organization that creates international standards in many areas, including computer and data communications.

- **Tagged PDF:** Tagged PDF contains information about the structure of the document's contents. This can help to display the document on devices with different screens, and when using screen reader software. Some tags that are exported are table of contents, hyperlinks, and controls. This option can significantly increase file sizes.
- **Create PDF form - Submit format:** Choose the format of submitting forms from within the PDF file. This setting overrides the control's URL property that you set in the document. There is only one common setting valid for the whole PDF document: PDF (sends the entire document), FDF (sends the control contents), HTML, and XML. Most often, you will choose the PDF format.
- **Export bookmarks:** Exports slide names as "bookmarks" (a table of contents list displayed by some PDF readers, including Adobe Reader).
- **Export comments:** Exports comments as PDF notes. You may not want this!
- **Export notes pages:** Exports a set of Notes pages after the set of slides.
- **Export automatically inserted blank pages:** Not used in Impress.
- **Embed standard fonts:** In previous versions of AOO, the standard fonts (Times, Helvetica, Courier, Symbol, and Zapf Dingbats) were only embedded into the PDF when the resulting file was of the PDF/A type, since the PDF/A standards require this. In recent versions, you can choose to embed these fonts in all PDF documents created by AOO to enhance display accuracy in PDF viewers.

Initial View Tab of PDF Options Dialog

On the Initial View tab (Figure 9), you can choose how the PDF opens by default in a PDF viewer. The selections should be self-explanatory.

Figure 9: Initial View tab

User Interface Tab of PDF Options Dialog

On the User Interface tab, shown in Figure 10, you can choose more settings to control how a PDF viewer displays the file. Some of these choices are particularly useful when creating a PDF for use as a presentation or a kiosk-type display.

Figure 10: User Interface tab

Window options section

- **Resize window to initial page.** Causes the PDF viewer window to resize to fit the first page of the PDF.
- **Center window on screen.** Causes the PDF viewer window to be centered on the computer screen.
- **Open in full screen mode.** Causes the PDF viewer to open in full-screen mode instead of a smaller window.
- **Display document title.** Causes the PDF viewer to display the document's title in the title bar.

User interface options section

- **Hide menubar.** Causes the PDF viewer to hide the menu bar.
- **Hide toolbar.** Causes the PDF viewer to hide the toolbar.
- **Hide window controls.** Causes the PDF viewer to hide other window controls.

Transitions section

Includes Impress slide transition effects as the respective PDF effects.

Bookmarks section

Select how many heading levels are displayed as bookmarks if *Export bookmarks* is selected on the General tab.

Links Tab of PDF Options Dialog

On the Links tab, like that in Figure 11, you can choose how links are exported to PDF.

Figure 11: Links tab of PDF Options dialog

Export bookmarks as named destinations

If you have defined Writer bookmarks, Impress or Draw slide names, or Calc sheet names, this option exports them as “named destinations” to which Web pages and PDF documents can link.

Convert document references to PDF targets

If you have defined links to other documents with OpenDocument extensions (such as .ODT, .ODS, and .ODP), this option converts the file names to .PDF in the exported PDF document.

Export URLs relative to file system

If you have defined relative links in a document, this option exports those links to the PDF.

Cross-document links

Defines the behavior of links clicked in PDF files.

Security Tab of PDF Options Dialog

PDF export includes options to encrypt the PDF (so it cannot be opened without a password) and apply some digital rights management (DRM) features.

PDF Options

PDF Options

General Initial View User Interface Links **Security**

File encryption and permission

Set passwords...

No open password set
PDF document will not be encrypted

Permission password set
PDF document will be restricted

Printing

☐ Not permitted

☐ Low resolution (150 dpi)

☒ High resolution

Changes

☐ Not permitted

☐ Inserting, deleting, and rotating pages

☐ Filling in form fields

☐ Commenting, filling in form fields

☒ Any except extracting pages

☒ Enable copying of content

☒ Enable text access for accessibility tools

Figure 12: Security tab

Note

Permission settings are effective only if the user's PDF viewer respects the settings.

- With an *open password* set, the PDF can only be opened with the password. Once opened, there are no restrictions on what the user can do with the document (for example, printing, copying, or changing it).
- With a *permissions password* set, anyone can open the PDF, but its permissions can be restricted. See the options in Figure 12.
- With *both* the open password and permission password set, the PDF can only be opened with the correct password, and its permissions can be restricted.

Figure 13 shows the pop-up dialog displayed when you click the **Set passwords** button on the Security tab of the PDF Options dialog.

Figure 13: Setting a password to encrypt a PDF

After you set a password for permissions, the other choices on the Security tab (shown in Figure 12) become available. These selections should be self-explanatory.

Exporting as Web Pages (HTML files)

You can export presentations as a series of web pages that can be viewed in any browser.

Note	Saving as web pages (HTML format) does not retain animation and slide transitions.
-------------	--

- 1) Select **File > Export** and choose **HTML Document** as the file type.
- 2) Create a folder for the files, supply a name for the resulting HTML file, and click **Save**. The HTML Export Wizard shown in Figure 14 opens.

Note	Depending on the size of your presentation and the number of graphics it contains, the HTML export function creates many HTML, JPG, and GIF files. If you simply save to your desktop rather than in a specific folder, these separate HTML and graphics files could end up anywhere on your machine. Be sure to create a folder to hold all the files.
-------------	---

- 3) Choose the design for all of the pages, either from an existing design or by creating a new one.
If you have not previously saved a design, the *Existing Design* choice is not available.

Figure 14: HTML Export - Choose a design

- 4) Click **Next** to select the publication type of web pages to create, as illustrated in Figure 15.
 - *Standard HTML*: one page for each slide, with navigation links to move from slide to slide.
 - *Standard HTML with frames*: one page with a navigation bar on the left-hand side; uses slide title as navigation links. Click on links to display pages on the right side.
 - *Automatic*: one page for each slide, with each page set with the Refresh meta tag so a browser automatically cycles from one page to the next.
 - *WebCast*: generates an ASP or Perl application to display the slides. Unfortunately, AOO has no direct support for PHP yet.

Figure 15: HTML Export - Choose publication type

- 5) Decide in what format images will be saved (PNG, GIF or JPG), and what resolution to use, as Figure 16 shows. When choosing a resolution, consider if you can what resolution the majority of your viewers might use.

Figure 16: HTML Export - Choose graphics type

- 6) If *Create title page* was chosen in step 4, supply the information for it on the next page, like that shown in Figure 17. The title contains an author name, e-mail address and home page, along with any additional information you want to include.

This page of the Wizard does not display if *Create title page* was not chosen.

Information for the title page

Author: Peter Hillier-Brook

E-mail address:

Your homepage:

Additional information:

☐ Link to a copy of the original presentation

Figure 17: HTML Export - Title page information

- 7) Choose the navigation button style to use for your viewers to move from one page to another, as Figure 18 illustrates. If you do not choose any, AOO will create a text navigator.

Select button style

☐ Text only

Navigation button styles:

- Red buttons: Previous, Previous, Next, Next, Home, aA, +, -
- White buttons: Previous, Previous, Next, Next, Home, aA, +, -
- Yellow buttons: Previous, Previous, Next, Next, Home, aA, +, -
- Green buttons: Previous, Previous, Next, Next, Home, aA, +, -

Figure 18: HTML Export - Choose navigation style

- 8) Select the color scheme for the web pages, with the tab shown in Figure 19. Available schemes include the document's existing scheme, one based upon browser colors, and a completely user-defined scheme. You can save a new scheme so that it will appear on the first page of the HTML export wizard.

Figure 19: HTML Export – Choose color scheme

- 9) Click **Create** to generate the HTML files. If this is a new design, a small dialog pops up, like that in Figure 20. If you want to reuse this design, give it a name and save it. Otherwise, click **Do Not Save**.

Figure 20: Naming the design

E-mailing a Presentation

AOO provides several ways to send an Impress document quickly and easily as an email attachment in one of three formats: .ODP (OpenDocument Presentation, AOO's default format), .PPT (Microsoft PowerPoint format), or PDF. These methods require that you have an email program on your computer. If you use web-based email service, you must access it manually and attach the Impress document.

To send the current document in .ODP format:

- 1) Choose **File > Send > Document as E-mail**. OpenOffice opens a new e-mail in your default e-mail program. The document is attached.
- 2) In your e-mail program, enter the recipient, subject and any text you want to add, then send the e-mail.

File > Send > E-mail as OpenDocument Presentation has the same effect.

If you choose **E-mail as Microsoft PowerPoint**, AOO first creates a .PPT file and then opens your e-mail program with the .PPT file attached. The .PPT file is not saved

on your computer. This gives you no opportunity to check if any formatting problems occurred during the file type change.

Similarly, if you choose **E-mail as PDF**, AOO first creates a PDF using your default PDF settings (as when using the **Export Directly as PDF** toolbar button) and then opens your e-mail program with the .PDF file attached. The PDF file is not saved on your computer.

Tip

If you want to keep a copy of the .PPT or .PDF file as well as e-mailing it to someone, first save or export the presentation into the required format, then attach it to an e-mail in the usual way.

Digital Signing of Documents

To sign a document digitally, you need a personal key, the certificate. A personal key is stored on your computer as a combination of a private key, which must be kept secret, and a public key, which you add to your documents when you sign them. You can get a certificate from a certification authority, which may be a private company or a governmental institution.

When you apply a digital signature to a document, a checksum is computed from the document's content plus your personal key. The checksum and your public key are stored together with the document.

Note

A checksum is a computed value that depends on the contents of a block of data. Checksums are transmitted or stored along with their data in order to detect corruption of that data. The receiving system recomputes the checksum based upon the received data, and compares this value with the one sent with the data. If the two values are the same, the receiver has some confidence that the data was received correctly.

A checksum may be 8 bits, 16, 32, or some other size. It's calculated by summing the bytes or words of the data block but ignoring [overflow](#). The checksum may be negated so that the total of the data words plus the checksum is zero.

[Internet packets](#) use a 32-bit checksum.

When someone later opens the document on any computer with OpenOffice, the program will compute the checksum again and compare it with the stored checksum. If both are the same, the program will signal that you see the original, unchanged document. In addition, the program can show you the public key information from the certificate. You can compare the public key with the public key that is published on the website of the certificate authority.

Whenever someone changes something in the document, this change breaks the digital signature.

On Windows operating systems, the Windows features for validating a signature are used. On Solaris and Linux systems, files that are supplied by Thunderbird, Mozilla or Firefox are used. For a more detailed description of how to get and manage a certificate and signature validation, see "Using Digital Signatures" in the AOO Help.

Note

Oracle Solaris is a proprietary Unix operating system offered by Oracle for SPARC and x86-64 based workstations and servers. From Sun Microsystems Sun Microsystems was an American company, founded in 1982, that specialized in computer workstations, servers, and software. It was known for pioneering technologies like the [SPARC processor](#), the [Unix-based Solaris operating system](#), and the [Java programming language](#). Sun was acquired by Oracle Corporation in 2010.

To sign a document:

- 1) Choose **File > Digital Signatures**.
- 2) If you have not saved the document since the last change, a message appears. Click **Yes** to save the file.
- 3) After saving, you see the Digital Signatures dialog. Click **Sign Document** to add a public key to the document.
- 4) In the Select Certificate dialog, select your certificate and click **OK**.
- 5) You see the Digital Signatures dialog again, where you can add more certificates if you want. Click **OK** to add the public key to the saved file.

A signed document shows an icon  in the status bar. You can double-click the icon to view the certificate.

Removing Personal Data

You may wish to ensure that personal data, versions, notes, hidden information, or recorded changes are removed from files before sending them to others or creating PDFs from them.

In **Tools > Options > OpenOffice > Security > Options**, you can set AOO to remind (warn) you when files contain certain information and remove personal information automatically when saving documents or creating PDFs.

To remove personal and some other data from a file, go to **File > Properties**. On the *General* tab, uncheck **Apply user data** and then click the **Reset** button. This removes any names in the created and modified fields, deletes the modification and printing dates, and resets the editing time to zero, the creation date to the current date and time, and the version number to 1.

To remove version information, either go to **File > Versions**, select the versions from the list and click **Delete**, or use **Save As** and save the file with a different name.

Opening and Saving a PowerPoint File

OpenOffice's Impress file format is highly compatible with Microsoft's PowerPoint format. You can open a PowerPoint presentation in Impress, edit it, then save it in its original PowerPoint format, or in Impress format. You can also create a new presentation in Impress and save it as a PowerPoint file.

Saving an Impress File as a PowerPoint File

- 1) Choose **File > Save As** from the menu bar.

- 2) Select the location where you want the PowerPoint file saved and type a name for the file.
- 3) Under *File type*, choose **Microsoft PowerPoint 97/2000/XP (.ppt)**.
- 4) Click **Save**. If you have the “Warn when not saving in ODF or default format” option set in **Options > Load/Save > General**, the message shown in Figure 21 appears. Click **Keep Current Format** to confirm that you want to save the file in Microsoft PowerPoint format. You can deselect the *Ask when not saving in ODF format* checkbox, and the message will not be shown again unless you re-enable it in the Options.

Figure 21: Warning message when saving in Microsoft PowerPoint format

Tip

Always save your work in Impress OpenDocument format (.odp) before saving in Microsoft format. Keep the Impress file as your working copy; if you need to change the presentation, change it in the Impress version and then save it again as PowerPoint. You are much less likely to have problems than if you open a file previously saved in PowerPoint format, edit it, and save it again.

Opening a PowerPoint File in Impress

If you receive a file from someone in PowerPoint format and need to edit it in Impress, here is how:

- 1) In OpenOffice, choose **File > Open** from the menu bar.
- 2) Under *File type*, choose All files (*.*) or Presentations or Microsoft PowerPoint 97/2000/XP from the drop-down list.
- 3) Navigate to the PowerPoint file, select it, and click **Open**.

The PowerPoint file can now be edited and saved as an Impress file or a PowerPoint file. To save the file as an Impress file, choose **OpenDocument Presentation (.odp)** as the **File Type**.
